

ABU RAIKHAN BERUNI*Tashmatova Medina**OwnDSMIFMF Art Studies (Theatre Studies) 2nd stage student**Mamlakkhan Jorayeva**Scientific supervisor*

Annotation: This article provides information about the life and creative work of our Grand Thinker Abu Raikhan Beruni, his works, pamphlets and a summary of Uygun's drama "Beruni".

Key words: Abu Raikhan Beruni, trigonometry, heliocentric system, globe, American continent, theology, cultural studies.

Our first president, I.A. Karimov, described Abu Raikhan Beruni as follows: "Beruni thought with extreme objectivity and truthfulness both in scientific matters, in evaluating historical events and his contemporaries." Abu Raikhan Beruni was born in 973 in the city of Kat, Khorezm. The encyclopedic scholar Beruni in his astronomical table says, "The center of the universe is not the earth, but the sun. He advanced the heliocentric hypothesis that all planets, including the earth, revolve around the sun. This hypothesis was scientifically confirmed 500 years later in Copernicus' heliocentric system. Alloma wrote more than 160 works, more than 100 large treatises. His works: "Monuments from ancient peoples", "Masud's law", "India", "Geodesia", "Mineralogy", "Saydana", etc. Treatise: "Al Fakhri sextant", "Tarikh al Hind". Beruni thoroughly mastered all the sciences of his time, primarily Astronomy, Physics, Mathematics, Theology, and Cultural Studies. At the same time, he was also a poet and literary critic. He was interested in science from a young age. He studied under the famous scientist Abu Nasr ibn Iraq Mansour. Ibn Iraq wrote a number of works on falakiyot and riyazat, and dedicated 12 of them to Beruni. Beruni always mentioned his teacher's name with great respect. In addition to his mother tongue, Alloma learned Arabic, Sogdian, Persian, Syriac, Greek and ancient Jewish languages. Later, he studied Sanskrit in India. Beruni was the first in the history of mankind to make a globe. European Galileo discovered the phenomenon of inertia in science 600 years before Galileo. He founded the science of trigonometry. In the work "Kanun Mas'ud", 450 years before Christopher Columbus, he scientifically justified the possibility of a continent - the current American continent - between the continents of Europe and Asia. In 1972, efforts to celebrate the 1000th anniversary of Abu Raykhan Beruni began. And on this basis, a large-scale film creation will be started. The screenplay of the film will be written in collaboration with the famous director Sh.Abbosov and the scholar of Orientalist Beruni's life and work, Pavel Bulgakov. In 1974, Sh. Abbasov shot this film. The film consists of 2 parts, the image of the people in the middle ages, the image of the horns, Beruni's biography, his activities from childhood to the end of his life, his difficulties, as well as his love for a slave girl named Raykhana. It is embodied in us. We all know that the social and political demands and ideology of which it was created are reflected in every film. The film about Beruni was not free from these requirements. In 1977, this film won the Golden Dolphin Award in Tehran and was well appreciated in its time. When it comes to the works dedicated to the personality and activities of our grandfather, M. Shaikhzada's drama "Abu Raykhan Beruni" which was lost due to repression, Adil Yaqubov's novel "Kohna Dunya",

Amon Matjon's dramatic epic "Beruni", Uygun's drama "Beruniy" is mentioned. Let me give a brief summary of the harmonious drama "Beruniy": The work is inspired by the spirit of "Patriotism", Beruni sees his homeland Khorezm more than his life, sacrifices himself for it and is ignorant of science. cruel fights between them are described. Because Beruni was a scholar and a pious person, he was expelled from his country. Even if he lives in honor in other countries, he misses Khorezm. The reason for his expulsion from the country is that scholars and religious leaders cannot see Beruni. Because they don't want the people to be enlightened and know their rights. After some time, Beruni returns to his native land and his life becomes more complicated. Because Khorezm branch focuses more on science and enlightenment and supports Beruni. People follow him. That is why they oppose Beruni. Mahmud Ghaznavi organized various conspiracies with the intention of taking over Khorezm and gave his sister Sayyora to Ma'mun, the branch of Khorezm. Brother and sister conspired to destroy Khorezm, who opened like a flower. How many nations will be destroyed on this road. Ghaznavi will be a doer of wealth and a down-to-earth person. He wants to take over not only his own country, but other countries as well and become a single ruler. He wants Beruni, who is mentally mature, to serve in his palace. Beruni remained in his own country and defied Ghaznavid's orders. In the end, Ghaznavi recognized Beruni's intelligence. Beruni tutors his son Prince Masoud.

The words of the great poet Uigun from the Beruni language:

Hello, my happy descendants! Hello, happy times!

I send you warm greetings for more than a thousand years!

Accept the greetings of your grandfather!

I devoted my life to science

If I lived another thousand years, I would do the same.

Because science depends on the perfection of the future

Because in science the beauty of truth becomes clear.

Science is a person's intelligence, intelligence, passion,

The priceless fruit of talent and genius.

The combination of happiness and bottomlessness is an erur science.

Science burns ignorance and darkness like a fire.

Science illuminates the path of people as a torch!

I created scientific jewels in the science chapter

I left it in the hands of time and history.

They will pass on my inheritance to you without any doubt

The hopes of the future shine in my eyes...

My children, as long as you are in the world, I live

It seems to me that there is no end.
